How to make Video Clips using VLC Media Player

Step 1: Insert disc into the computer’s disc drive.

Step 2: A pop-up window will prompt you to choose a program to play the disc. Select “Play DVD movie using VideoLAN VLC media player”.

Step 3: VLC will automatically open and begin to play the disc. If it does not, open the menu ‘Playback’ in the VLC window and select ‘Play’. Or you can use the playback controls at the bottom of the VLC window.

Step 4: Open the ‘View’ menu and select Advanced Controls.
Step 5: Press the ‘Frame by Frame’ button on the far right.

Step 7: Using the slider, navigate to the time your clip begins. Starting it a few seconds before is helpful.

Step 8: Press play and allow the movie to play through to the section you want saved. Once it reaches this point, press Record again.*

Step 9: VLC automatically saves the clips as mp4 files in the Videos library (on a Windows PC).
**Step 10:** Navigate to your clips by selecting the ‘Libraries’ icon located near the ‘Start Menu.’ The files are located in the ‘Videos’ folder. If desired, these clips can be copied to a flash drive or burned to a DVD disc. Otherwise, they remain in the Video library of the computer.

*VLC does not record subtitles. Follow steps 9-10. To play the clip with subtitles, open it in VLC media player. Select the ‘Subtitle’ menu and select ‘Closed Caption1’. Press play.*
